Question 1: Variables and Data Types

a) Create variables to store the following information: your name, age, and favorite programming language.

b) Print each variable along with a descriptive message.

Question 2: Control Structures

a) Write a program that takes an integer input from the user and prints whether it is even or odd.

b) Implement a program that checks whether a number is positive, negative, or zero.

Submission Guidelines:

Submit a Python file (.py) with the solutions to all the questions.

Provide comments to explain your code.

Ensure that the code runs without errors.

Test your code with different inputs to demonstrate its correctness.
